

**INDEKSI POLJOPRIVREDNE PROIZVODNJE, 2023
INDICES OF AGRICULTURAL PRODUCTION, 2023**

Fizički obim poljoprivredne bruto proizvodnje u Federaciji BiH u 2023 smanjen je za 5,7% u odnosu na 2022. godinu.

The physical volume of gross agricultural production in the Federation of BiH in 2023 was reduced by 5.7% compared to 2022.

Na pad poljoprivredne proizvodnje u 2023. godini u odnosu na prethodnu godinu uticao je pad biljne proizvodnje, i to za 7,1%.

The decline in agricultural production in 2023 compared to the previous year was influenced by the decline in crop production, by 7.1%.

Kod proizvodnje grupa većine proizvoda sa većim učešćem u biljnoj proizvodnji je zabilježen pad (žita, povrće), kao i kod grupa usjeva sa manjim učešćem u biljnoj proizvodnji (voće, grožđe).

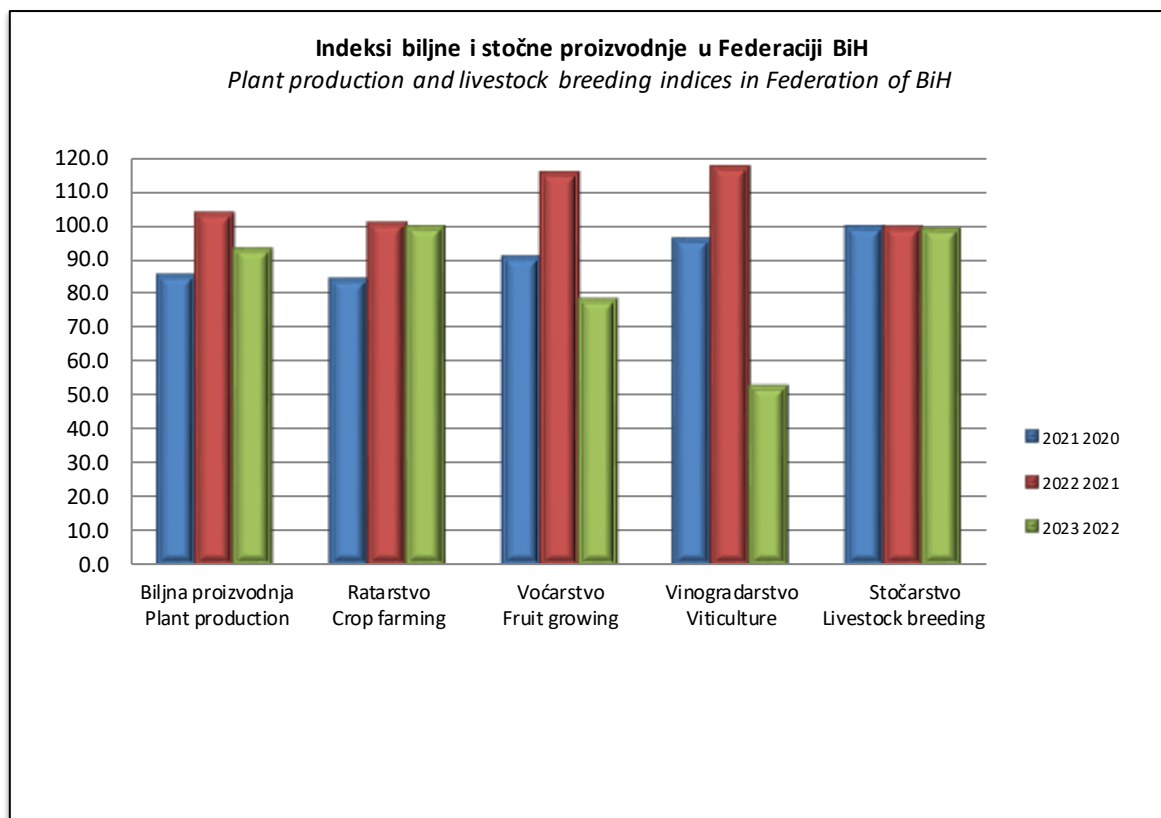

A decline was recorded in the production of most product groups with a greater share in crop production (cereals, vegetables), as well as in crop groups with a smaller share in crop production (fruits, grapes).

Od proizvoda koji imaju udio u stočnoj proizvodnji, u 2023. u odnosu na 2022. zabilježen je pad svih proizvoda za oko 2%, a najveći je u proizvodnji meda, i to za 17,9%.

Of the products that have a share in livestock production, in 2023 compared to 2022, a decrease of about 2% was recorded in all products, and the biggest decrease was in the production of honey, namely by 17.9%.

U ukupnoj bruto proizvodnji u 2023. biljna proizvodnja učestvuje sa 74%, a stočna proizvodnja sa 26%.

In the total gross production in 2023, crop production participates with 74%, and livestock production with 26%.

INDEKSI POLJOPRIVREDNE PROIZVODNJE

Indeksi fizičkog obima poljoprivredne proizvodnje

Cilj istraživanja: Da se osiguraju podaci za redovna mjerenja promjena obima ukupne poljoprivredne proizvodnje i promjena obima po granama i grupama proizvoda.

Periodika istraživanja: Godišnja

Metod prikupljanja podataka i izračunavanja:

Indeksi fizičkog obima proizvodnje izračunavaju se iz podataka koji se dobijaju redovnim istraživanjima u odjelu statistike poljoprivrede.

Prema KDBiH 2010 izračunavanje fizičkog obima poljoprivredne proizvodnje obuhvaća područje A Poljoprivreda, šumarstvo i ribarstvo, Oblast 01, Grana 01, isključujući granu 01.7 Lov, stupačarenje i uslužne djelatnosti u vezi sa njima.

Ponderacioni faktor za obračun indeksa je trogodišnji prosjek prosječnih proizvođačkih cijena iz izvještaja o prodaji i otkupu poljoprivrednih proizvoda.

Definicije

Neto indeksi fizičkog obima poljoprivredne proizvodnje izračunati su iz vrijednosti cjelokupne proizvodnje umanjene za vrijednost proizvoda upotrijebljenih za ishranu stoke. Lančani indeksi poljoprivredne proizvodnje računaju se na osnovu podataka o ostvarenoj proizvodnji, koji se množe ponderima (trogodišnji pomični prosjek cijena dobivenih statističkim istraživanjima o prodaji i otkupu poljoprivrednih proizvoda) kako za tekuću, tako i za prethodnu godinu. Lančani indeksi dobijaju se stavljanjem u odnos tekuće i prethodne godine.

INDICES OF AGRICULTURAL PRODUCTION

The total agricultural output indices

Aim of survey: To calculate changes of the total agricultural output and changes of the physical volume of agricultural production, by branch and group of products.

Frequency: Annually

Data collection and calculation method:

Indices of the physical volume of production are calculated from data obtained through regular surveys in the Department of Agricultural Statistics.

According to KDBiH 2010, the calculation of the physical volume of agricultural production includes area A Agriculture, forestry and fishing, Area 01, Branch 01, excluding branch 01.7 Hunting, animal husbandry and related service activities.

The weighting factor for the calculation of the index is the three-year average of average producer prices from reports on the sale and purchase of agricultural products.

Definitions

Net indexes of the physical volume of agricultural production are calculated from the value of the production minus the value of the products used for livestock feeding. Chain indexes of agricultural production are calculated on the basis of data on realized production, which are multiplied by weights (three-year moving average of prices obtained from statistical research on the sale and purchase of agricultural products) for both the current and the previous year. Chain indices are obtained by comparing the current year with the previous year.
