

SAOPĆENJE PRIOPĆENJE FIRST RELEASE

GODINA / YEAR XIX

SARAJEVO, 19.03.2026.

BROJ / NUMBER: 7.1.2

INDEKSI POTROŠAČKIH CIJENA – FEBRUAR/VELJAČA 2026. GODINE THE CONSUMER PRICE INDICES – FEBRUARY 2026

Potrošačke cijene u februaru/veljači 2026. godine, u prosjeku su porasle za 0,3% u odnosu na prethodni mjesec.

Posmatrano po odjeljcima Klasifikacije lične/osobne potrošnje prema namjeni, cijene su porasle u odjeljcima: Alkoholna pića i duhan za 1,1%, Namještaj, kućanski uređaji i redovno održavanje kuće i Zdravstvo za po 0,5%, Hrana i bezalkoholna pića i Prijevoz za po 0,4%, Stanovanje, voda, električna energija, plin i drugi energenti i Restorani i hoteli za po 0,3%, Obrazovanje za 0,2% i Komunikacije za 0,1%.

Cijene su pale u odjeljcima: Odjeća i obuća za 3,1% i Ostala dobra i usluge za 0,2%.

U odjeljku Rekreacija i kultura u prosjeku, cijene se nisu mijenjale.

U februaru/veljači 2026. godine u odnosu na februar/veljaču 2025. godine, cijene su porasle za 3,1% (godišnja inflacija).

The consumer prices in February 2026, on average increased by 0.3% in relation to the previous month.

According to the divisions of Classification of Individual Consumption by Purpose (COICOP), the prices increased in the divisions: Alcoholic beverages and tobacco by 1.1%, Furniture, household equipment and routine maintenance of the house and Health by 0.5% each, Food and non-alcoholic beverages and Transport by 0.4% each, Housing, water, electricity, gas and other fuels and Restaurants and hotels by 0.3% each, Education by 0.2% and Communications by 0.1%.

The prices decreased in the divisions: Clothing and footwear by 3.1% and Miscellaneous goods and services by 0.2%.

In Recreation and culture division, on average, prices did not change.

In February 2026 in relation to February 2025, prices increased by 3.1% (annual inflation).

METODOLOŠKA OBJAŠNJENJA

Indeks potrošačkih cijena predstavlja mjeru promjena cijena proizvoda i usluga koje rezidentna domaćinstva/kućanstva kupuju radi zadovoljenja svojih ličnih/osobnih potreba.

Namjena

Indeks potrošačkih cijena se koristi kao mjera inflacije, za usklađivanje plaća i zarada u skladu sa kolektivnim ugovorima, te penzija i socijalnih davanja. Također se može koristiti i za cijenovno prilagođavanje klauzula u dugoročnim kupoprodajnim ugovorima, omogućuje upoređivanje kretanja cijena unutar zemlje između pojedinih regiona, te služi kao osnov za deflacioniranje pojedinih makroekonomskih agregata u statistici nacionalnih računa i u druge svrhe.

Indeks potrošačkih cijena

Indeks potrošačkih cijena u Federaciji Bosne i Hercegovine izračunava se na osnovu reprezentativne liste proizvoda koju čini 611 proizvoda. Svakog mjeseca prikuplja se 11013 cijena na unaprijed definiranom uzorku prodajnih mjesta i geografskih lokacija.

Obuhvat indeksa

Geografski obuhvat - Cijene se prikupljaju na pet lokacija (gradova) u Federaciji Bosne i Hercegovine (Bihać, Mostar, Sarajevo, Tuzla i Zenica) odabranih prema kriteriju broja stanovnika i njihovoj ulozi u geografskom području kojem pripadaju.

Obuhvat proizvoda - Obuhvaćeni su najvažniji proizvodi i usluge koje kupuje stanovništvo radi finalne potrošnje. Obuhvat dobara i usluga redovno se revidira kako bi se očuvala reprezentativnost liste proizvoda s obzirom na ukuse potrošača i njihove navike u pogledu kupovine.

Snimanje cijena

Sve cijene prikupljaju uposlenici Federalnog zavoda za statistiku prema utvrđenom vremenskom rasporedu i unaprijed odabranom uzorku prodavnica/prodavaonica, tržnica i ustanova koje pružaju različite usluge stanovništvu. Snimatelji cijena dobivaju jasne specifikacije naziva proizvoda, njegove COICOP šifre i jedinice mjere i na osnovu/temelju tih informacija samostalno biraju konkretan proizvod čiju će cijenu snimati na određenom prodajnom mjestu, u skladu/sukladno sa kriterijem najprodavanijeg proizvoda na datom prodajnom mjestu. Kako bi se osiguralo da snimatelji iz mjeseca u mjesec snimaju cijene istih proizvoda, te kako bi se moglo pratiti koje proizvode snimatelji posmatraju na terenu, u upitnik se unose karakteristike proizvoda, kao što su marka, vrsta i količina proizvoda koji se snima, te informacije o eventualnim zamjenama ovih karakteristika ukoliko ih bude.

Takav način snimanja omogućuje praćenje promjene kretanja cijena između dva perioda tj. praćenje dinamike kretanja cijena.

Za potrebe indeksa potrošačkih cijena, snimanje cijena se vrši sljedećih dana u mjesecu:

- za poljoprivredne proizvode koji se prodaju na tržnicama cijene se prikupljaju dva puta mjesečno, i to u prvoj i trećoj sedmici/tjednu u mjesecu;
- za sve ostale proizvode cijene se, u skladu/sukladno sa važećim Evropskim/Europskim regulativama, prikupljaju jedanput mjesečno (između 1. i 21. u mjesecu), s tim da se nužno održava isti interval između prikupljanja.

NOTES ON METHODOLOGY

Consumer Price index represents a measure of average changes in price of a product (goods and services) which consumers buy for their personal needs.

Purpose

The CPI can be used for various purposes. It can be used as a measure of inflation, for price adjustment of clauses in long-term sales and purchases contracts (for example, the CPI can serve for indexing wages and salaries in collective agreements, for indexing pensions etc.), it enables a comparison of inflation in the country with inflation in other countries as well as a comparison of price movements within a particular country and regions, also it can be used as a base for deflating macroeconomic aggregates in statistic of national accounts and for other purposes.

Consumer Price Index

The CPI in the Federation of Bosnia and Herzegovina is calculated on the basis of the representative List of products that consisted of 611 different items. Each month 11013 prices are being collected in a fixed panel of geographical locations and outlets.

Scope of the Index

Geographic coverage - The prices are collected in five geographic locations (cities) of the Federation of Bosnia and Herzegovina (Bihać, Mostar, Sarajevo, Tuzla and Zenica) chosen according to the criterion of their weight in terms of population and their role with respect to the geographical areas they belong to.

Product coverage - All relevant goods and services bought by the reference population for the purpose of final consumption are included in the index. The coverage of goods and services is regularly reviewed in order to ensure the representative list of product with respect to the consumer tastes and purchasing practices.

Price collection

All the prices are collected by the personnel of the Institute for Statistics of FBiH according to a pre-defined schedule and panel of outlets, markets and institutions providing different kinds of services to citizens. The price collectors receive clear specifications of the name of item, its COICOP code, and unit of measurement that allows them to choose a concrete item for price collecting in a specific outlet, in accordance with the criterion of the most sold products in that outlet. In order to be certain that the collector is collecting prices for exactly the same items each month, the form for price collecting also includes the informations on detailed product description in terms of brands, variety and quantity, as well as the information on possible replacements of items.

All of this allows the monitoring of the exact price change in different periods.

For the purposes of CPI calculations, the price collection is scheduled as follows:

- for agricultural products sold on green markets the prices are being collected twice a month, in the first and third week of a month;
- for other items the prices, in accordance with the European Regulative, are being collected once a month (between 1st and 21st of the month) with the obligation of maintaining the same interval of price collection.

Ponderi

Ponderi koji se primjenjuju za izračunavanje indeksa potrošačkih cijena su koeficijenti koji odražavaju relativnu važnost odabranih proizvoda i usluga u ukupnoj potrošnji domaćinstava/kućanstava na teritoriji Federacije BiH. Pomoću njih se izračunavaju elementarni indeksi kao ponderisani/ponderirani prosjeci. Bazirani su na podacima povezanim sa finalnom potrošnjom domaćinstava/kućanstava i na podacima o broju stanovnika.

Osnovni izvor podataka za izradu pondera za obračun indeksa potrošačkih cijena je Anketa o potrošnji domaćinstava/kućanstava. Za izračunavanje indeksa potrošačkih cijena, od januara 2018. godine primjenjuju se ponderi koji se baziraju/temelje na podacima iz Ankete o potrošnji domaćinstava/kućanstava iz 2015. godine. Ponderi se svake godine korigiraju indeksom kretanja cijena u prethodnoj godini.

Klasifikacija

Za obračun indeksa potrošačkih cijena upotrebljava se Klasifikacija lične/osobne potrošnje prema namjeni (Classification of Individual Consumption by Purpose-COICOP) po kojoj se proizvodi i usluge dijele na dvanaest osnovnih odjeljaka za koje se izračunavaju indeksi.

Agregiranje

Izračunavanje indeksa potrošačkih cijena počinje izračunavanjem elementarnih indeksa (indeksa proizvoda) i indeksa reprezentativnih stavki na nivou gradova. Pri tome se kao mjera srednje vrijednosti koristi geometrijska sredina. Agregatni indeksi se nakon toga izračunavaju korištenjem Laspeyres-ove formule za ponderisanu aritmetičku sredinu počevši od indeksa reprezentativnih stavki na nivou gradova pa do ukupnog indeksa Federacije Bosne i Hercegovine. Referentna baza za izračunavanje indeksa je 2015. godina.

Ostale definicije

Proizvod - bilo koji proizvod ili usluga za ličnu/osobnu potrošnju koji se mogu kupiti, grupni naziv za proizvode i usluge.

Reprezentativna stavka - proizvod na najnižem nivou agregacije, odnosno proizvod u prodajnom mjestu na jednoj geografskoj lokaciji za koji se može procijeniti ponder. Proizvodima iz nižih nivoa agregacije nije moguće dodijeliti ponder jer za to ne postoje reprezentativni podaci.

Weights

Weights used for calculating the CPI reflect relative importance of the sampled goods and services in the total consumption of resident households within the territory of the Federation of BiH. They are used for elementary indices calculations as the weighted averages. They are based on the data linked to the Household Final Consumption and population.

The most important data sources for calculating the weights used in the consumer price indices is the Household Budget Survey. From January 2018, the compilation of the CPI has been based on the weights derived from household expenditures made in 2015. Weights are updated every year according to the price changes in the previous year.

Classification

For the CPI calculation, the Classification of Individual Consumption by Purpose (COICOP) is used. According to the COICOP, goods and services are divided into twelve main groups for which indices are calculated.

Aggregation

Consumer Price Index calculation starts from the computation of elementary aggregate indices (items indices) and representative position at the level of cities. For this purpose, the geometric mean is used as a measure of average value. Elementary aggregate indices are calculated by using Laspeyres formula for weighted arithmetic mean starting from the level of representative positions indices at the level of cities to the overall index at the level of Federation of Bosnia and Herzegovina. Reference base year for index calculation is 2015.

Other definitions

Product - any consumer good or service that can be purchased, a term covering both, goods and services.

Representative position - lowest level of product aggregation, i.e. item in an outlet in a geographic location with a weight. The items at the lower levels of aggregation do not have weights attributed due to the lack of representative data.
